SAN IGNACIO BELIZE

The Healing Hands Abroad Team returned to the Cayo District of Belize for a weeklong mission working with the staffs of the San Ignacio Community Hospital and the Western Regional Medical Center in Belmopan. The Team performed primarily cleft lip and palate surgery which is not available to children in need throughout the country.

The Western Regional Medical Center in Belmopan is the secondary receiving center for the smaller community hospitals and clinics throughout all of the Cayo District. It maintains a large clinic system, Emergency Room, two operating rooms, and an adult, maternity, and pediatric ward totaling 40 beds. The HHA Team was fortunate to partner with the doctors and staff there doing our work.

Thank you

Many thanks to all those who donated in support of our mission, enabling us to provide life changing surgery and positively impact so many lives.
